

## **EXPERIMENT 31:**

**Create a Storage service using any Public Cloud Service Provider (Azure/GCP/AWS) and check the public accessibility of the stored file to demonstrate Storage as a Service.**

### **AIM**

To create and configure a **cloud storage service using Microsoft Azure Blob Storage**, upload a file, enable public accessibility, and verify the accessibility of the stored file through a public URL, thereby demonstrating **Storage as a Service**.

### **PROCEDURE**

1. Log in to the **Microsoft Azure Portal** using a valid Azure account.
2. Create a **Storage Account** in Azure by providing the required subscription, resource group, storage account name, region, and performance settings.
3. After the storage account is successfully created, open the storage account and navigate to **Data storage → Containers**.
4. Create a new Blob Storage container with a suitable name.
5. Configure the container's access level to allow **anonymous public access to blobs**.
6. Upload a file such as a text file, image, or PDF into the created container.
7. Select the uploaded file and view its **Blob URL**.
8. Copy the Blob URL and open it in a separate browser window or an incognito/private browser window.
9. Verify that the uploaded file can be accessed without signing in to the Azure account.
10. Thus, Azure Blob Storage provides cloud-based storage and public access to the stored file, demonstrating **Storage as a Service**.

## IMPLEMENTATION:

The screenshot displays the Azure portal interface for a deployment named **azurestoragex\_1788241613641**. The page title is "Overview" with a close button. A search bar is located below the title. On the left sidebar, there are navigation links for "Overview" (selected), "Inputs", "Outputs", and "Template". The main content area features a green checkmark icon and the text "Your deployment is complete". Below this, a purple icon is followed by deployment details: "Deployment name : azurestoragex\_1788241613641", "Subscription : Azure for Students", "Resource group : laaS-Practical-RG", "Start time : 1/9/2026, 11:17:07 am", and "Correlation ID : 33b51932-96b5-4932-a7e5-6a487964ecfc". There are two expandable sections: "Deployment details" and "Next steps". A blue button labeled "Go to resource" is positioned below the "Next steps" section. At the bottom of the main content area, there is a green circular icon with a dollar sign, followed by the heading "Cost management" and the text "Get notified to stay within your budget and prevent unexpected charges on your bill." with a link "Set up cost alerts >". The footer of the portal includes the text "Add or remove favorites by pressing Ctrl+Shift+F". The Windows taskbar at the bottom shows various application icons, the system language set to "ENG", and the time "11:17".

| CONTENT-DISPOSITION               | <div></div>                                       |
| LEASE STATUS                      | Unlocked                                          |

## Result:

Thus, a Storage Account and Blob Storage container were successfully created in Microsoft Azure. A file was uploaded and configured for public accessibility. The file was successfully accessed using its public Blob URL, demonstrating Storage as a Service (SaaS) using Microsoft Azure.
